

# AMP for Email

**Easily create user first Emails**

Naina Raisinghani, PM, AMP Project

[nainar@google.com](mailto:nainar@google.com)

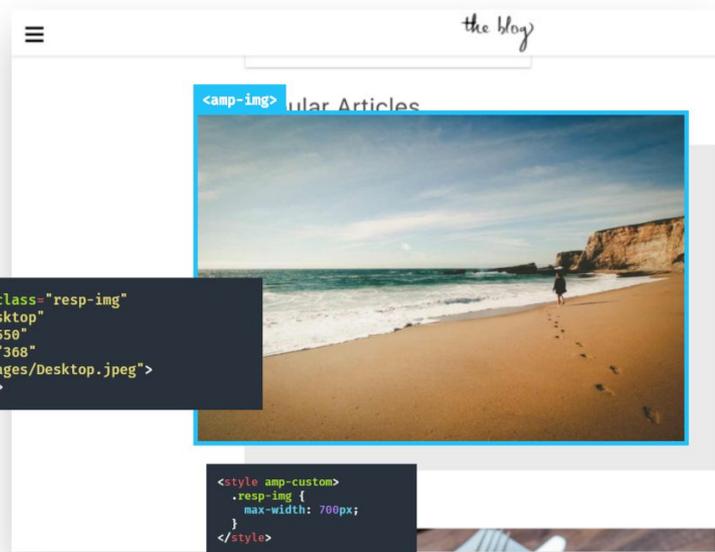

**AMP is a web component  
framework to easily create  
fast, user-first websites**

# What is AMP?

AMP is a web component framework to easily create fast, user-first content while supporting the long-term success of every web publisher, merchant, and advertiser.

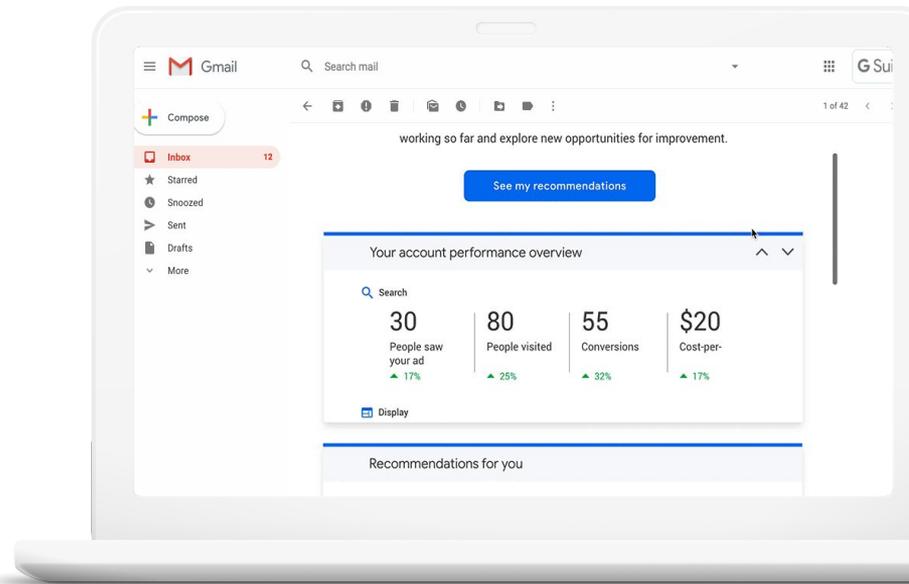

# What are AMP Emails?

**AMP for Email applies the AMP framework to make emails both interactive and dynamic.**

Currently, Gmail, Mail.Ru, and Yahoo Mail support AMP emails. This means that you need to send an AMP and HTML version (as a fallback) of the same email to users. The HTML fallback will be automatically displayed to users 30+ days after the email was received by Gmail.

The [AMP website](#) and [Gmail guide](#) are great parallel resources to find out more.

Fictitious data for demonstration purposes only.

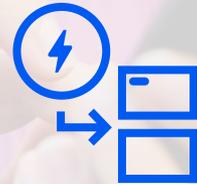

Use **AMP** to send interactive,  
dynamic **emails**.

Bring **engaging experiences** to emails

Fetch **up-to-date information**

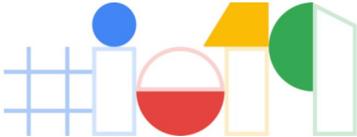

Allow users to **take action**

```

# AMP Components

The following are a few of the supported AMP for email components. Visit [amp.dev](https://amp.dev) for the full list.

## Carousel

Displays a series of content allowing user to navigate horizontally and take actions within an email.

## Accordion

Displays collapsible and expandable content sections, giving the user control over how much content they see.

## Sidebar

A sidebar provides a way to display meta content like navigation links, buttons, and menus.

## Dynamic AMP data (AMP Bind, AMP List, AMP Form)

Customized data enables the reader to take actions within the email through AMP List and AMP Form.

## Timeago

Timeago will give the timestamp details of the past time of open. For example, "Posted x hours ago."

# When to use AMP Emails

✓ **My audience can receive AMP emails**

I have a good number of users on platforms that support AMP, such as Gmail, Mail.Ru, beta: Outlook.com, and Yahoo!

✓ **My budget is flexible**

I have enough budget to support the development of creative and coding elements for both HTML and AMP emails.

✓ **Time is on my side**

I have extra lead time for creative rounds and for an A/B test to find a creative winner.

✓ **My priorities are clicks and engagement**

I want to drive engagement to landing pages and other products.

# When to use AMP Emails

Is AMP the way to go? Here are some initial questions to ask.

Is the email considerably longer than what lands above the fold?

Is there nonessential content that can be hidden, giving the reader the option to expand or click through if they choose?

Is there heavy content, multiple CTAs, or both?

Are there multiple modules with similar types of content?

Do you want to direct more clicks to content at the bottom of your email?

# AMP for Email

How to send AMP Emails

# What can I do now?

- Ask your ESP if they support AMP for Email
- Start playing around in the Playground ([amp.gmail.dev/playground/](https://amp.gmail.dev/playground/)) and make and test your first AMP Email
- Register to send your AMP Email with any client you're interested in

# ⚡ What's the registration process?

**1**

Check that you **meet  
all the guideline**

**2**

Send an AMP-enabled  
**production-ready  
email**

**3**

Fill out the  
**registration form**
